

Social Media Manager SOP

Content-to-Design Workflow — for the SMM and any team members she brings on

Every post starts one of two ways. Find your path below.

PATH A — Content Written First

Use this when the content manager already wrote the post copy.

- 1 Content is written. That's your starting point.
- 2 Go to Pinterest. Find 2-3 references that match the vibe/idea of the content.
- 3 Go to Claude. Open the Design Brief skill.
- 4 Fill in the brief. Include the Pinterest reference link in the "Reference / Inspiration" field.
- 5 Save everything in the post's folder (see Folder System below).

PATH B — Reference Found First

Use this when you spot a great design on Pinterest before content exists.

- 1 Scrolling Pinterest. Spot a design with real potential for our page.
- 2 Save the reference image or link.
- 3 Go to Claude. Use the content-writing skill.
- 4 Ask Claude to write content in the same format/text ratio as the reference — tailored to our audience. Claude knows our ICP.
- 5 Content is ready. Now follow PATH A starting at Step 3 (Design Brief).

The Post Folder System

Every post gets its own folder inside the FASTECH.PAK Drive folder.

- Name each folder by number: **Post 1, Post 2, Post 3...**
- Each folder holds: the Pinterest reference image(s), AND the final Design Brief (from Claude).
- The designer opens the folder and has everything needed. No extra messages, no hunting for context.

Rules to Remember

- Never skip the Design Brief step. The designer should never have to guess.
- Always include the Pinterest reference link in the brief — even a rough match helps.
- Folder name = post number, every single time. Consistency is the whole point.
- Unsure about brand voice or visuals? Ask. Don't guess.

This SOP covers the content → design handoff only. Posting, scheduling, and reporting are separate steps — ask your manager if those aren't covered yet.
